

TECHNICAL DATA

K-Burst 1000 Defoaming Compound

Product Description and Purpose

K-Burst 1000 is a 10% active emulsion of polydimethyl siloxane formulated to control foam in industrial processes and products. This versatile defoamer is readily diluted with water or other process liquids for easy addition to foaming solutions and maximum cost effectiveness. **K-Burst 1000** efficiently controls foam over a wide pH range and in nonionic, cationic and anionic systems. It can be used as received or pre-diluted with water or other process liquids before use.

Features/Benefits

Concentrated
Economical to use

General Usage Directions

Concentrations ranging from 10 to 200 ppm are sufficient for foam control in most systems. In testing to determine the most effective working concentration, a good starting point is to add 25 parts of antifoam emulsion (as received) per million parts of foamer. The results at this concentration will indicate whether to increase or decrease the amount.

Physical Properties

Form	Colloidal Liquid
Color	White
Odor	Mild
Specific Gravity	1.00-1.02

Caution

Keep out of reach of children. Keep container tightly closed when not in use. Protect from freezing. For industrial use only. Read Safety Data Sheets for more information.
